MY COMPETENCY

EXPERIENCE

Software Engineer I

JP Morgan Chase

~ 01/2024 - Working, Mumbai

Worked on JPMC CIB payments internal project RDS (Reference Data Service). Application provides ways to exchange business critical data between different inbound and outbound services, via APIs, kafka messaging services, MQ, file I/O

Key Achievements:

- Security Overhaul: Eliminated 100% of SSAP/SonarQube vulnerabilities post Java 17 upgrade, achieving 75% sonar coverage, accelerating release cycles by 25% through IDA authentication/authorization across 5+ modules.
- Kafka Infrastructure Leadership: Classified 50+ Kafka topics via cross-team collaboration (GEM/GLASS), enabling role-based access controls for 15+ downstream systems and reducing event-processing errors by 40%.
- Version Upgrade: Migrated various API from V1 to V2, fixing file ingestion and config issues. Tested/fixed NAF, Titan restrictions, and ledger business date logic, standardizing request/response formats for seamless COIN, SMS, and CUI transitions. Added SOFR rate pull, FX rate correction, instrument onboarding, and KYC refresh APIs.
- Tech Stack Modernization: Upgraded legacy systems to Java 17 & GemFire, standardizing 100% of API request/response formats and cutting deployment errors by 50% via Jenkins CI/CD pipelines.
- Cost & Efficiency Gains: Automated 20+ cron jobs (FX rates, KYC, SOFR) via Autosys migration, slashing manual effort by 40 hours/month and boosting data accuracy by 30%.
- API Scalability: Delivered 4+ Spring Boot microservices with 99.9% uptime; resolved 95% of UAT defects by re-engineering Cassandra data ingestion avoiding key conflicts.
- Operational Support: Monitored/optimized holiday calendars and loan account APIs (VLS/DTS), resolving 90% of production alerts within SLA and enhancing system reliability. Documented APIs on Swagger and maintained confluence for knowledge sharing.

Roles & Responsibilities:

- Engaged with clients to refine requirements, translating them into technical specs via JIRA.
- Followed Agile methodology - participated in sprint planning, demos, and design discussions for scalable solutions.
- Developed and maintained APIs, performing unit, regression, and end-to-end testing.
- Conducted code reviews, improved code quality, managed deployments via CI/CD (Jenkins), and supported releases.
- Owned application enhancements, standardization, and support.

SUMMARY

Highly driven professional with extensive experience in conducting research, contributing to open-source projects, and developing solutions leveraging AI, IoT, and blockchain technologies. Delivering impactful solutions that solve complex business problems. Passionate about the ever-evolving tech industry and committed to staying up-to-date with the latest trends and technologies. Skilled at building relationships and collaborating with cross-functional teams, clients, and stakeholders to drive successful outcomes.

SKILLS

Server-side: NodeJS, NestJS, Jest, Java, Spring Boot, JUnit, Hibernate, Postman

Client-Side: TypeScript, JavaScript, Angular, React, Redux

Cloud & Containers: AWS, Azure, IBM Cloud, Docker, Docker-compose, Kubernetes, Docker swarm, Microservices

Databases, Cache: MySQL, Oracle, Postgres, Liquibase, CouchDB, MongoDB, Cassandra. Kafka, Zookeeper, IBM MQ, Gemfire, Redis

CI/CD & Automation: Jenkins, Concourse, Shell scripting, Autosys, n8n.io

Management Frameworks: Scaled Agile (SAFE), LEAN, Agile, Scrum, Fast Works

AI and tools: Python, Claude, kimi-dev, Deepseek, Gemini, Copilot, Open AI

Data Visualization & Processing: Tableau, MS Excel, matplotlib

EDUCATION

M.Tech (Power Electronics)

NIT Kurukshetra

~ 06/2018 - 06/2020

%

87 / 100

PG Diploma (Industrial Automation)

Prolific Systems & technology, Noida

~ 02/2015 - 07/2015

PG Diploma (Power, T&D)

NPTI Badarpur, New Delhi

~ 07/2014 - 02/2015

%

AWARDS

Manager's Choice Award @IBM

Gold Medal 2020 @NIT Kurukshetra

Gold Medal 2015 @NPTI Badarpur

Application Developer

IBM India Pvt Ltd

~ 04/2021 – 10/2023, Bangalore

Worked on Vinturas project, leveraging Hyperledger-fabric and innovative solutions to optimize client needs in blockchain-based ecosystems.

Key Achievements:

- Cost-Efficient Architecture: Slashed IKS logging costs by 35% and improved incident response time by 50% via Rancher/Grafana monitoring and automated n8n.io workflows, saving 20 hours/week in manual tasks.
- CI/CD Innovation: Streamlined Concourse pipelines to accelerate deployment cycles by 40%, enabling zero-downtime updates for 10+ Dockerized microservices.
- Blockchain Advancements: Built 5+ EVM D-apps (Solidity, Truffle) with MetaMask integration, reducing transaction latency by 60% and scaling user onboarding to 200+/month.
- Client-Centric Development: Translated 50+ stakeholder requirements into JIRA user stories, reducing sprint backlogs by 30% and aligning cross-functional teams.
- Microservice Excellence: Containerized 15+ microservices using Docker, achieving 99.8% test coverage through rigorous unit, regression, and E2E testing.

Roles & Responsibilities:

- Client Interaction and Requirements Refinement: Engaged directly with clients to understand their needs and business requirements. Translated these requirements into technical specifications using tools like JIRA.
- Agile Methodology and technical Design: Actively participated in sprint planning, and demonstrating sprint outcomes. Highly involved in design discussions to ensure robust and scalable solutions.
- API Development and Maintenance: Developed new APIs and updated existing ones. Conducted comprehensive testing including unit testing, regression testing and end-to-end API testing.
- Documentation and Version Control: Maintained API documentation using Swagger, ensuring clarity and accessibility for the team. Managed version control of the project using Bitbucket and employed branching methodologies for effective collaboration and versioning.
- Code Review and Deployment: Initiated and managed pull requests for code review and collaborated on merging branches. Oversaw the deployment of code to development environments, while monitoring the CI/CD pipeline in Concourse for seamless integration and delivery.

Researcher

NIT Kurukshetra

~ 07/2018 - 08/2020, Haryana

- Conducted in-depth research for my thesis focused on "Advanced Optimization Techniques for Engineering Applications." Implemented modeling and solutions for intricate challenges encompassing Multi-period Dynamic Economic Dispatch, Unit Commitment, and Multi-period Optimal DC/AC Power Flow.
- Explored areas including Energy Storage System integration, Power System observability enhancement via PMU technology, and Transmission Network operation and planning.
- Employed various optimization methods such as Non-Linear Programming, Mixed Integer NLP, and Relaxed MINLP to integrate energy systems.
- Additionally, delved into learning state-of-the-art Meta-heuristics and Machine Learning Algorithms for enhanced problem-solving capabilities.
